

GATEKEEPER ENTERPRISE

Proximity-based centralised access management platform

Set access control lists, manage credentials, and review audit logs from an easy-to-use management console.

The GateKeeper wireless authentication system allows organisations to enhance workflow and achieve higher levels of security without inconveniencing the user.

ACCESS MANAGEMENT & REPORTING

GateKeeper Enterprise allows real-time data collection on a central server that runs on your network. This database will allow the administrator to generate detailed access logs for all computers on the network.

The centralised admin console also allows the administrator to deploy security policies such as mandatory two-factor authentication, access control lists for specific computers, and assigning user to workstations.

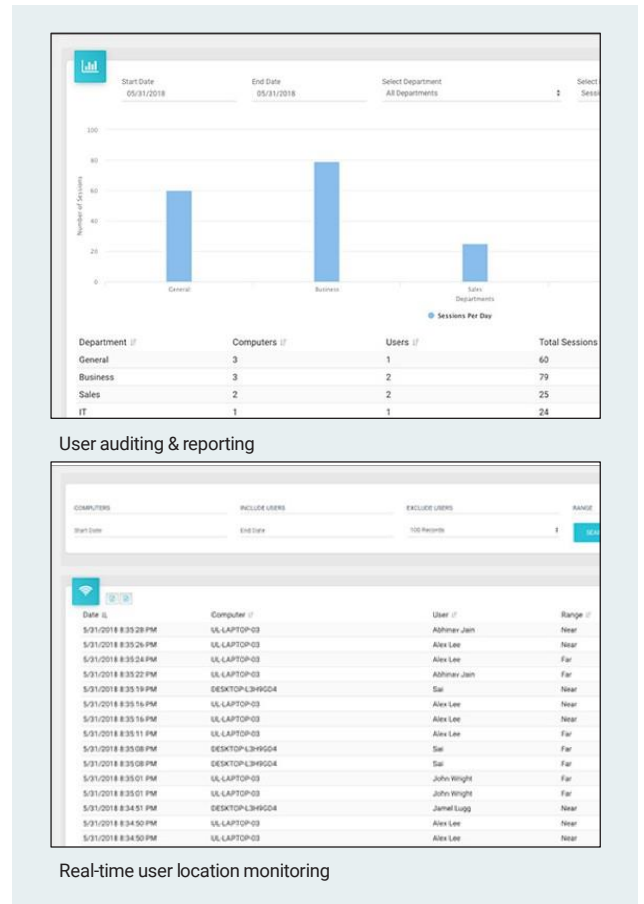

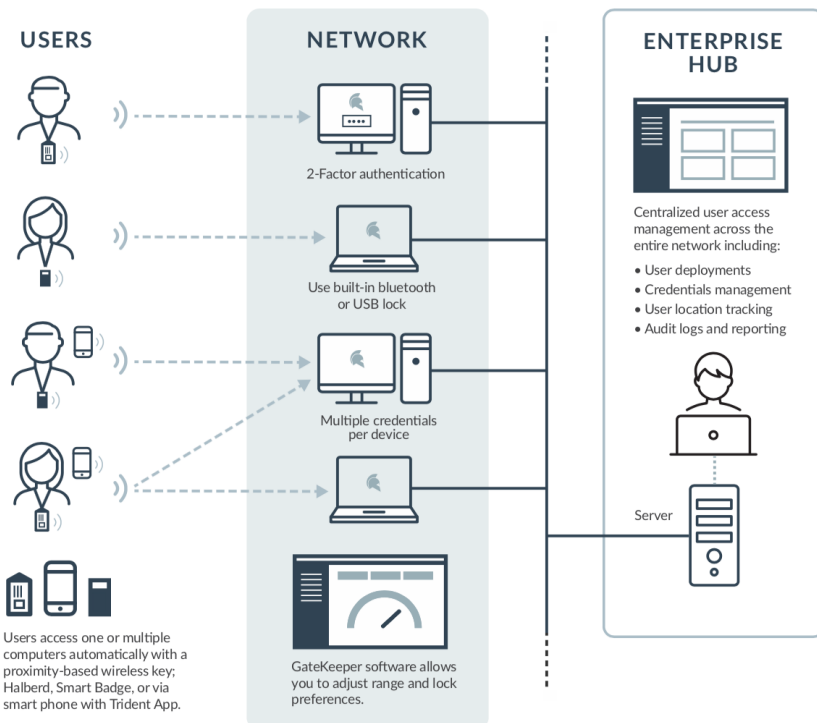

WIRELESS AUTHENTICATION FOR EVERY USER

GateKeeper uses a computer's built-in Bluetooth, or a USB dongle that serves as a non-intrusive authentication detectors.

Each user is provided with a GateKeeper Halberd or Smart Badge, or with the Trident App, users can use their smart phone as a wireless key. Wireless keys (tokens) are registered for each person on the server and serve as a unique identifier for that individual. The token will be detected and used for authentication when the individual logs into their computer.

Enterprise Hub provides an easy way to administer security policies for all computers and users on the network, while detailed access logs verify authenticity of users logging onto a company's network, locally or remotely.

GateKeeper Enterprise: The key to centralised access management

No other access management system provides such a wide range of features and benefits.

Problem	Feature	Function	Benefit	Stakeholder
Lack of security at workstations.	Enhanced, seamless security.	Prevents users from leaving sensitive data open when they leave the workstation.	Helps protect businesses from breaches that could result in fines or loss of reputation.	<ul style="list-style-type: none"> IT Security team Owner
The organisation does not meet compliance standards/policies.	Individual authentication.	Individual authentication.	The organisation doesn't have to worry about being penalized in an audit for using shared passwords.	<ul style="list-style-type: none"> Compliance officer
The organisation would like to increase efficiency.	Touchless authentication.	Gatekeeper unlocks machines when a user approaches, saving time with: <ul style="list-style-type: none"> Overall authentication process Forgotten passwords Mis-typed credentials 	The organisation has more time to devote to day to day business.	<ul style="list-style-type: none"> CFO Finance Employees
The company wants more information about how employees spend their day.	Business intelligence reporting.	Detailed audit logs of rich data.	The company can make profit enhancing decisions using the time and motion data gained from using Gatekeeper.	<ul style="list-style-type: none"> Operations Administration Employees

FEATURES & BENEFITS

- Automatic lock (100% Security).
- Fast login with optional 2-Factor Authentication.
- Regulatory compliance (e.g. GDPR/data protection).
- Centralised credentials management.
- Richly detailed audit logs for workplace optimisation and security audits.
- Web-browser based user interface.

CENTRALISED MANAGEMENT

- Multiple matching of GateKeepers to computers.
- Group computers/users according to access control needs.
- Revoke/delete GateKeeper credentials from the server admin console.

AUDIT LOGS FULL OF RICH DATA

- Powerful analytics to measure efficiency and time secured.
- Detailed access logs from each GateKeeper - enabled computer.
- Identify users even on shared computers.
- Filter data based on GateKeeper credentials, computers and activity.

SPECIFICATIONS

- Client software supports Windows devices with Win 7-10, and Mac OSX version 10.13 or above.
- Enterprise Hub requirements: Windows Server 2012 & SQL Database
- Adjustable range from inches to 30 feet.
- State-of-the-art AES256 encryption to secure credentials.
